Wireless Interface with ASCII Serial Output

**Product Features**
- ASCII serial output
- Serial output to printer, display, PC or PLC
- Simple configuration and calibration
- Wireless range of up to 800 m

**Introduction**

The T24-SO outputs a user defined ASCII report that can contain live values and sum of up to eight T24 transmitters and forms part of the T24 modular telemetry system.

The data sent by transmitter modules can be utilised by multiple receivers such as displays, handheld readers, analogue outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimised to give outstanding coverage.

The T24-SO supports RS232 and RS485 connectivity.

The T24 Toolkit software offers a fast and simple way to configure the report format and to choose the associated transmitter modules. The reports could be just a single line giving a value to be fed into a serial display, for example, or could be a multi-line report for delivery to a printer.

**T24 System Overview**

T24 Wireless Telemetry Sensor System is a modular wireless solution for industrial sensor applications.

High accuracy, high quality measurement is interfaced with simple yet powerful configuration and monitoring software.
Specifications

Power Supply
- Power supply voltage: 9 to 32 Vdc
- Supply current at 12V (typical): 100 mA

Radio
- Radio type: Licence exempt transceiver
- Radio frequency: 2.4 GHz
- Transmit power: 10 mW
- Range: Up to 800 m

Environmental
- Operating temperature range: -20 to 55 ºC
- Storage temperature range: -40 to 85 ºC
- Maximum humidity: 95% non-condensing
- IP rating (excluding USB connector): IP67/Nema4
