**Introduction**

The T24-TA transmitter connects to Pt100 temperature sensors and forms part of the T24 modular telemetry system. The data transmitted by the T24-TA can be received by multiple T24 receivers that include displays, handheld readers, analogue outputs, relay modules and computer interfaces.

T24 transmitters have been designed for battery operation and support an ultra low-power sleep mode whilst offering class leading wireless coverage and range. Configurable transmission rates from once per day to 200 per second cope with a wide range of measurement and monitoring applications. A choice of enclosures enabling battery connection, field connectivity and environmental sealing up to IP67 ensure these modules provide a flexible solution to your wireless sensor requirements.

The T24-TA works with a PT100 type 385 temperature sensor. Temperature can be transmitted in Celsius, Fahrenheit or Kelvin.

**T24 System Overview**

T24 Wireless Telemetry Sensor System is a modular wireless solution for industrial sensor applications.

High accuracy, high quality measurement is interfaced with simple yet powerful configuration and monitoring software.
